All you have to pay for are the calls and services you have used whilst using our network.

Save Money with; Ouriptel - IP Telephone Systems

The Ouriptel Multi-Path Gateway provides for the first time true Business Class IP Communications but you only pay "Economy Rates".

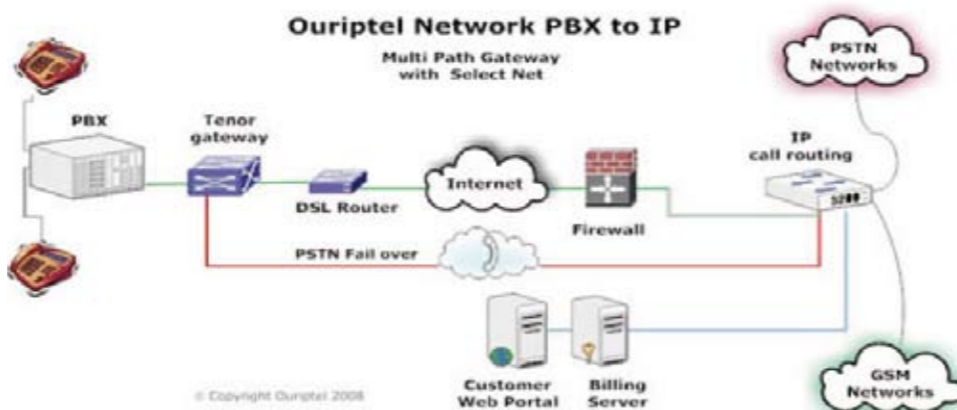

The Ouriptel Business Solution is the easiest and most cost-effective method for a small to medium business to take immediate advantage of the benefits of using IP Telecommunications, particularly the significant cost savings on their telephone bill.

Now you can choose the savings of IP Communications without the risk to call quality or lost connections when making calls. The Ouriptel Business Solution allows customers to maintain their existing telephone system, including the PABX, whilst routing outbound calls on the Ouriptel IP communications network in order to generate significant savings. Many end users have found savings of 30-60% from their previous traditional telephone service.

This is how it works:

Figure 1.1

Data and Security

An online backup service, that protects your precious business data, backing up remotely to our core servers, it does so securely using high level encryption technology.

We supply a comprehensive client side backup application bundled with various database and backup modules, for backing up files and databases from client-side computers to the Ouriptel Offsite Backup Server, which provides back up for servers and desktop machines.

Convenience: Why not use SMS to contact your customers?

Why not use the Ouriptel SMS from your desktop solution. It is simple and easy to use; you can send one at a time or create your own groups to send multiple messages.

Efficiency

Sick and tired of email spam? Ouriptel can remove 99.9% from your email before it gets to your networks or desktop. We provide fully hosted email solutions or simply filter your mail for you.

Do you want effective advertising?

When you are an Ouriptel customer you get one month free advertising targeted at users who want to know about your company. Try it before you buy it.

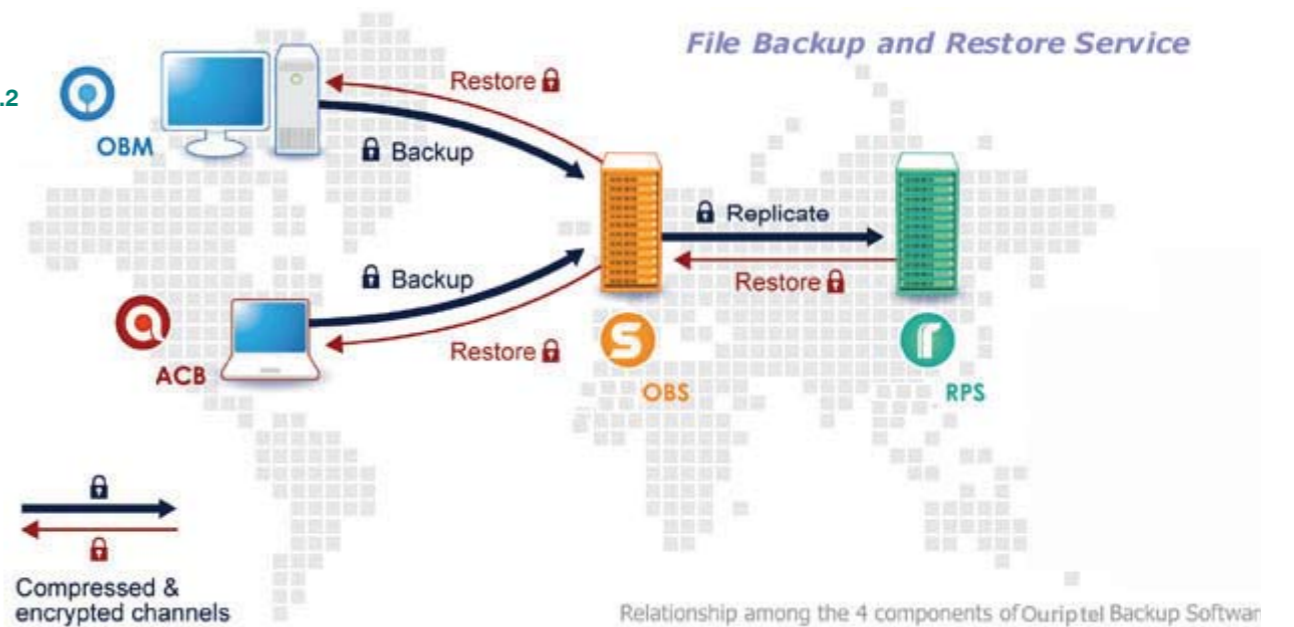

Ouriptel provides highly advanced online advertising through our customer portal. Advertise with us and you can target you products and services to the Ouriptel customers using our "Business Advantage" range of products.

So give us a call or talk to your local dealer to find out more.

Since we have installed the Ouriptel Gateway we have made significant savings on our monthly communications costs. The service we received and the easy to read and understand billing is an added bonus. We are very happy with the amazing product and service.

CONNECTING BUSINESS

Guaranteed to save you

Your questions answered.

What do you have to change with your current PBX phone system?

Nothing the Ouriptel Gateway is placed on the inbound lines prior to your PBX (phone system) it does not change any settings or require any special programming of your current system.

What period contract do I need to sign?

No contract is required, Ouriptel believes that you will love our service and price so much we do not need to lock you in with contracts. The only paperwork we require is a simple credit application.

Do I need to change my phone numbers or change my current Telco account?

No you retain your current inbound lines and provider.

Do you need new handsets?

No the Gateway simply captures outbound calls coming from your current system and handsets and applies the lowest cost route rule to send them to Ouriptel to save you money.

What happens if call quality is not acceptable or if the IP route fails?

The Ouriptel Gateway will automatically switch you back to the PSTN network seamlessly and you will not lose the call or notice that it has been switched, this means, you will have no call drop outs or poor voice quality.

What do you need to have the best IP voice experience?

Good voice over Internet has only one requirement adequate bandwidth to support the number of concurrent users. This is easy to calculate, each call requires 8k per second plus a 25k per second overhead. For example if you have six concurrent calls they would need 200k per second so we would recommend minimum DSL broadband speed of 256K.

Are there different models of gateways for different sized organizations?

Yes models vary dependent on the number of lines required by the customer for inbound and outbound calls. We also have models to suit both analogue and digital PBX systems.

Are there any other requirements or enhancements we can make?

Yes your DSL connection should be the biggest bandwidth available in your area, with new plans coming out all the time, the higher bandwidth connections are often cheaper than what you were paying in the past.

It is also very useful to ensure your DSL router is up-to-date and provides QoS (Quality of Service). This feature allows you to set priority to voice packets over your connection (UDP) and assists in ensuring the very best quality of call.

Can we have IP phones added internally in addition to our current handsets?

Yes we can provide IP phones that provide additional outbound capacity with no need to add any additional inbound phone lines.

If we have at more than one site can we make free calls site to site?

Yes if you have Ouriptel gateways at multiple sites each of these sites can make calls to the other at no cost.
